

Claude Jargon **FIXER**

A ROBONUGGETS GUIDE

Three ways to make Claude talk like a human: an output style, a skill, or one rule in your CLAUDE md file. Every resource in here is complete - copy it straight off the page.

README

WHAT THIS IS - a complete fix kit for Claude's over-explaining habit. Three fixes, smallest first. Page 3 holds the ONE prompt that sets everything up; every other resource is linked on pages 4, 5, and 8.

HOW TO SET IT UP - copy the prompt on page 3, paste it into Claude Code, and restart when it tells you. Pages 4-5 link the on-demand skills and the rule this all builds on.

THE COMMUNITY - a pre-built version of this kit and the people using it live at skool.com/robonuggets - where we build and sell AI systems, and master Claude Code + Claude Design.

01 The problem, in one page

You ask Claude (Opus 5) for one small thing. It does the thing well. Then it keeps going: a caveat you did not ask for, a "one thing worth knowing", three paragraphs of jargon. Two real costs:

1. **It does not speak human.** Answers read like a systems engineer wrote them. "Tracking pixels", "proxy-prefetching", "telemetry" - for a question about a newsletter.
2. **The real note drowns.** Sometimes one caveat genuinely matters. You cannot find it in the sea, so you either read everything or you skim past the one line that counted.

The three fixes at a glance

FIX	WHERE IT LIVES	WHEN IT FIRES
1 • Output style from Anthropic	a md file in <code>~/.claude/output-styles/</code>	the whole session, every reply, until you switch back
2 • A skill <code>/bro · /wait-what</code>	a md file in <code>~/.claude/skills/</code>	only when YOU type the command on a reply that lost you
3 • One rule ASD-STE100	one line in your CLAUDE md	always on, every session, zero effort after day one

02 Fix 1·Output Styles – the one-prompt setup

Anthropic's official mechanism. This single prompt installs the style, flips the settings, and tells you when to restart. The ASD-STE100 rule (page 5) is already baked in.

COPY EVERYTHING BELOW · PASTE INTO CLAUDE CODE · DONE

Set my Output Style to the one below.
Save it in my global output-styles folder. Name the file after its name field.
Then set outputStyle to that name in my global settings file and in my local project settings files. Create the folder or the key if either is missing.
Do not break the existing JSON.
Then list the files you changed and tell me to restart Claude Code.

```
---
name: ELI5
description: keep it simple pls
keep-coding-instructions: true
---
```

It's been a long day and my brain is fried, talk to me like I'm 5.
Only report to me in ASD-STE100 Simplified Technical English. That means approved plain words, active voice, and one instruction or idea per sentence. Small words, short sentences, short paragraphs. If you have to use a big word, explain it right after. Only return what's actually necessary. Just tell me what you did, did it work, what do I do now.
If I have to decide something: 2 options max, the context I need to pick fast, and which one you'd go with.
Keep paths and commands exact. I have no brain cells left for the rest.

Good to know: `keep-coding-instructions: true` changes the voice while keeping Claude coding normally. To switch back later, run `/config` and pick Default under Output style (the old `/output-style` command was removed in v2.1.91).

Where this style came from: x.com/lydiahallie/status/2080378470111256907

Official docs: code.claude.com/docs/en/output-styles

03 Fix 2· Make a skill

The on-demand path. Nothing changes until a reply loses you – then one command re-explains it. Send your agent a link below and ask it to install the skill.

1. A reply comes back dense. You type the command.
2. The same answer comes back in plain words – facts, paths, and numbers stay identical.
3. These skills are a few lines each. You can write your own version in 5 minutes.

The three skills from the video

/bro – restates the last reply in plain human language, no jargon

github.com/dmmulroy/skills/blob/main/bro/SKILL.md

/wait-what – re-pitches the message that lost you, with the context you were missing

github.com/mattpocock/skills (skills/productivity/wait-what)

/quick – answer-fast: the action first, numbered steps, one next step, no preamble

skool.com/robonuggets

When to reach for these: keep one installed even if you run the page-3 style. A skill is the escape hatch for the one reply that still lands dense.

04 Fix 3 · The ASD-STE100 rule

The principle underneath the whole kit - and the reason the page-3 prompt works.

What is ASD-STE100? A real writing standard from the 1980s aviation industry. Aircraft manuals are written in it so that mechanics - often non-native English speakers - cannot misread an instruction. Limited vocabulary, active voice, short sentences, one idea per sentence, no metaphors. If it is safe enough for jet engines, it can survive your inbox summary.

You already have it: the page-3 prompt carries this rule inside the ELI5 style ("Only report to me in ASD-STE100 Simplified Technical English"). Want it always-on without an output style? Put that same line in your CLAUDE md instead - that is what I run.

Where this came from

Pieter Levels: "This finally stopped Claude's crazy pursuit of talking more and more unintelligible"
x.com/levelsio/status/2086046112142545061

Matt Pocock: added it to his global CLAUDE md
x.com/mattpocockuk/status/2084753070437609606

Mike Hostetler: early mention
x.com/mikehostetler/status/2079245119455150418

krOder: "might actually be working wtf"
x.com/krOder/status/2085950632041885975

The counter-take (worth reading): it was built for aircraft manuals, not prose
x.com/sujayath/status/2085230441918022036

As a packaged skill: github.com/danyuchn/asd-ste100-skill

The standard itself: en.wikipedia.org/wiki/Simplified_Technical_English

05 Any voice you want

The bigger pattern: these are not "make it simple" tools. They are three places to change how ANY model writes - Claude, Codex, anything that reads a md file. Same grid, any intent:

	OUTPUT STYLE	A SKILL	AGENT MD RULE
More human?	human.md: "talk like a friend"	/casual: say it warmer	rule: write like you speak
More corporate?	corp.md: "exec summary tone"	/formal: boardroom it	rule: formal business English
More copywriter?	copy.md: "sell, do not explain"	/punchy: rewrite as ad copy	rule: hooks first, short lines

Read the columns as commitment levels: a style is a mode you enter, a skill is a button you press, a rule is a default you set. Pick by how often you want the voice, not by which tool sounds cleverest.

Remember: Opus 5 still tops most benchmarks. The voice is a settings problem, not an intelligence problem - which is exactly why a markdown file can fix it.

06 Where this goes next

The easy part is pasting a fix from this guide. The skill that pays is knowing which lever to reach for - style, skill, or rule - for any behaviour you want out of an agent, and being able to write that file yourself in minutes.

That is what we practise every week: building AI systems you can actually sell, and mastering Claude Code + Claude Design along the way. The pre-built version of this kit lives there too.

07 The one-page recap

1. **The one prompt** - copy it from page 3, paste into Claude Code, restart when it tells you. The ASD-STE100 rule rides inside it.
2. **Skills** - /bro, /wait-what, /quick. Send your agent the link, ask it to install. Fires only when you call it. Page 4.
3. **The rule** - already inside the page-3 prompt. Skip the style? Put the same line in your CLAUDE md. Page 5.
